

Symposium on SCIP Database and its Implications on Exports to EU

Organized by

CII Institute of Quality & Global Product Compliance (GPC), Sweden

8 December 2020, Tuesday, 1600 – 1800 h IST

ARTICLE

The European Union has notified a new set of requirements on Substances of Concern in articles as such or complex objects (Products) also known as the SCIP database under the Waste Framework Directive. Companies that are supplying articles containing substances of very high concern (SVHCs) on the Candidate List in a concentration above 0.1% weight by weight (w/w) on the EU market will be obligated to notify the European Chemical Agency (ECHA) from 5 January 2021.

As per the explanation available, the purpose of the SCIP database is to ensure information about SVHCs is available throughout the whole life cycle of products and materials, including at the waste disposal stage. European Chemical Agency (ECHA) plans to release SCIP v1 by the end of October 2020 when the database will be open to receive data to fulfil the legal obligation.

If your company is supplying or intends to place products in the European market from 5th January 2021 onwards and the products are likely to contain any of the listed SVHC, please join us in the online **Symposium on SCIP database and its Implications on Exports to EU** that intends to outline the requirements in detail and provide answers to your queries. The following topics will be discussed at the Symposium:

- **Introduction to the SCIP Notification process**
- **SCIP data structure and content with examples**
- **Obligations for EU suppliers who will place the products in EU market**
- **Implications on Non-EU suppliers and compliance strategies**

Expert speakers from EU with extensive hands on experience on REACH and other chemicals Regulations will be covering these topics and answer queries.

The Symposium will be held online from 1600 to 1800 h on 8th December 2020 (Tuesday). Participation to the Symposium is by invitation and without charge. Persons attending the general symposium will be invited for follow up sessions on sector specific approaches. Register for this event [here](#).
